EDUCATION

Indian Institute of Technology, Indore

2021 – 2025

B.Tech. in Electrical Engineering

EXPERIENCE

Pacific Data Integrators

June 2025 – Nov 2025

Data Engineer

Remote

- Reduced pipeline migration time by re-architecting 15+ legacy Ab Initio graphs into Informatica IDMC mappings, cutting manual ETL effort by 40%.
- Engineered cloud-native data pipelines integrating SQL Server, CSV sources, and Secure Agent, enabling fully automated, scheduled data delivery with zero manual intervention.
- Eliminated 100% of critical deployment blockers by diagnosing and resolving schema mismatches, data type conflicts, and performance bottlenecks across 3 production environments.

Flam

Dec 2025 – Present

Data Scientist

Bengaluru

- Designed and deployed GenAI-powered agentic workflows using LangChain and OpenAI/Gemini APIs, enabling autonomous multi-step reasoning pipelines for real-world enterprise use cases.
- Built and orchestrated AI agents with tool-use, memory, and planning capabilities using LangGraph and AutoGen, reducing manual intervention in data processing tasks by automating end-to-end decision-making flow.
- Developed RAG (Retrieval-Augmented Generation) pipelines integrating vector databases (Pinecone / ChromaDB) with LLMs to enable context-aware, grounded responses for internal knowledge retrieval and question-answering systems.

PROJECTS

End-to-End ETL Pipeline - Insurance Data Analytics | *Python, SQL, Informatica*

- Architected a production-grade ETL pipeline processing insurance policy and claims data from SQL Server into a cloud data warehouse, reducing data latency by 60%.
- Automated ingestion via scheduled pipeline triggers, eliminating 100% of manual data loads and ensuring SLA-compliant delivery for downstream analytics teams.
- Enforced data quality at scale by implementing 20+ validation and transformation rules in Python/SQL, producing analytics-ready datasets with less than 0.1% error rate.

Teachable Machine Web App | *React, TensorFlow.js, Vercel*

- Shipped a browser-native ML app enabling real-time image classification via webcam with live confidence score visualization, zero backend required.
- Trained and deployed a custom multi-class model using Google Teachable Machine, achieving over 90% prediction accuracy on custom gesture classes.
- Deployed on Vercel with a responsive React UI

TECHNICAL SKILLS

Languages: C++, Python, C, Java, JavaScript, HTML, SQL

Data Engineering: Informatica IDMC, Ab Initio (analysis), ETL Pipelines, SQL Server, MySQL

Frameworks & Libraries: ReactJS, Spring Boot, Node.js, Next.js, Django, Scikit-learn, Pandas

Developer Tools: VS Code, MATLAB, Git, Google Cloud Platform, Verilog

ACHIEVEMENTS

JEE Advanced - All India Rank 3679 (top 0.5%)

2021

JEE Mains - 99.6 Percentile

2021

WorldQuant Alphathon - Secured Rank 6

2023
